

The advertisement is split into two panels. The left panel shows a highly ornate, green-patina radiator with intricate floral and leaf patterns. The right panel shows a more classic, grey-patina radiator with a simpler, elegant design. Both radiators are set in a room with white walls, a wooden floor, and a window with curtains. A Carron logo is positioned in the top right of the right panel.

Discover Cast Iron Perfection from Carron

A great deal of skill and work goes into producing our range of cast iron radiators, and we are enormously proud to declare that Carron have been awarded the ISO: 9001 accreditation for quality management. Our products also conform to the BS: EN 442 -2 standard.

Our radiators are assembled and finished by hand in Carron's Lincolnshire workshop and are subject to regular inspections, carried out at each stage throughout the process.

Each section is sand cast using CNC moulds and 3D modelling techniques together with efficient cast production line. The result is a crisp, detailed decoration, which achieves a superior aesthetic quality.

Upon receipt of an order, sections are transferred to our specially built paint shop or to the polishing workshop to receive the first layer of paint or first round of polishing depending on the client's preference.

Once dry, they are put through a rigorous, high pressure testing process. We ensure the total time that every section is tested exceeds more than 24 hours, at a rate well beyond that of normal water pressure found in UK domiciles.

When each radiator has passed the testing phase, they can then be transferred back to the spray team to complete Carron's unique dual painted method: this is where a final round of painting or hand polishing is carried out to produce a high quality finish.

Now completed they are given a final inspection and a Quality Control stamp of approval when they can be prepared for dispatch.

Application in all environments

Carron traditional radiators are perfectly positioned between the heritage and charm of historic design and the pragmatic efficiency required of 21st century heating.

There is common misconception that cast iron radiators are inefficient and expensive to run compared to modern day counterparts, a point we'd argue. The cast iron sections retain heat for longer and gradually releases the warmth creating a constant warm ambient temperature. Thus, Carron radiators more than match the performance of present heating solutions.

These heating characteristics make them ideally suited to work alongside alternative fuel sources, such as ground source pumps and solar powered heating supplies.

Cast iron is a robust material and its incredible longevity makes it an economical investment, sure to last several generations.

The added visual appeal and styling mean Carron radiators are at home in period homes and restoration projects but are by no means out of place in contemporary dwellings, industrial and cutting edge developments and decor.

Our radiators come with a full 10 year guarantee, such is the trust we have in the quality of work we produce.

Our Hand Burnished/Satin Polished finish is achieved by using abrasives to polish the surface of the Cast Iron. We then apply light oil to the radiator prior to despatch. This will require maintaining by reapplying the oil as required. Any contact with moisture should be avoided and therefore we do not recommend using this finish in bathrooms etc.

Due to the limitation of the printing process/photography, please note that colours may vary from the actual painted finish. We recommend you request a free colour swatch prior to purchase. (Not available for Highlight Polish, Hand Burnished & Satin Polished Finishes.)

As each radiator is hand built and seal compression/machined faces vary slightly, measurements given are for guidance only and should not be used for the location of pipe work.

We reserve the right to amend designs without prior notification.

Bespoke Finishes

Here at Carron we pride ourselves on the level of bespoke detailing and options we are able to provide. With our onsite paint and spray shop we can finish any radiator from a choice of over 4,000 paints and offer an expert colour matching service to attain even greater levels of customisation.

We also can finish the radiators in a selection of product specific paints which come in a range of finishes, such as semi-gloss, full gloss and satin.
